

Computing

Mindsets

- Exploration
- Questioning
- Thinking critically
- Thinking logically
- Creativity

A high-quality computing education equips pupils to use computational thinking and creativity to understand and change the world. The core of computing is computer science, in which pupils are taught the principles of information and computation, how digital systems work and how to put this knowledge to use through programming. Building on this knowledge and understanding, pupils are equipped to use information technology to create programs, systems and a range of content. Computing also ensures that pupils become digitally literate – able to use, express themselves and develop their ideas through information and communication technology – at a level suitable for the future workplace and as active participants in an ever evolving digital world.

Computing Skills and Expertise

- design and create content
- develop programming
- solve problems
- reason and explain
- analyse and compare

Computing Proficiency

Computational exploration and creativity

Knowledge of:

- computing systems and networks
- data and information
- computer science (programming)
- creating media
- e-safety

Systems

- LTP map
- MTPs
- ilearn2 computer Scheme
- Support and challenge
- Building on prior learning
